

REAGENT

Meaning: A reagent is a substance or compound added to a system to cause a chemical reaction or to test for the presence of another substance.

1. A reagent is essential for conducting various chemical reactions in the laboratory.
2. The chemist carefully measured the reagent to ensure accurate results in the experiment.
3. Different reagents can produce varying colors when mixed, indicating a chemical change.
4. In biochemistry, enzymes often act as reagents that facilitate reactions at a molecular level.
5. Safety protocols must be followed when handling hazardous reagents to prevent accidents.
