

RECOMBINATION

Meaning: Recombination is the process by which genetic material is exchanged between chromosomes, resulting in new combinations of genes that contribute to genetic diversity.

1. Recombination plays a crucial role in genetic diversity among populations.
2. The scientists observed a fascinating case of recombination in the laboratory.
3. Through recombination, the virus was able to develop resistance to the treatment.
4. Understanding the mechanisms of recombination can help improve crop resilience.
5. Recombination events can significantly alter the evolutionary trajectory of species.
