

RECONDENSATION

Meaning: Recondensation is the process of transforming vapor back into liquid form, often used to purify substances or increase their concentration.

1. Recondensation of the vapor allowed the researchers to collect pure samples for analysis.
2. The process of recondensation is crucial in the distillation of alcohol to achieve higher concentrations.
3. In climate science, recondensation plays a significant role in the formation of clouds and precipitation.
4. After cooling, the gas underwent recondensation, transforming back into a liquid state.
5. Engineers studied the effects of temperature variations on the efficiency of recondensation in their new design.
