REDUCTIBILITY

Meaning: Reductibility is the quality or condition of being capable of being reduced to simpler or more fundamental components or elements.

1. The concept of reductibility plays a crucial role in understanding the relationship between complex systems and their simpler components.

2. In philosophical discussions, reductibility often refers to the ability to express higher-level phenomena in terms of more fundamental elements.

3. Many scientists debate the reductibility of certain theories, questioning whether complex interactions can truly be simplified.

4. The mathematician's paper explored the reductibility of certain equations, providing insights into their underlying structures.

5. Critics argue that the reductibility of emotions to mere biochemical reactions overlooks the richness of human experience.
