

REED-MACE

Meaning: Reed-mace is a tall, aquatic plant of the genus Typha, characterized by its long, slender leaves and distinctive brown flower spikes, commonly found in wetlands and marshes.

1. The wetland was filled with lush reed-mace, creating a natural habitat for various bird species.
2. In early summer, the reed-mace blossoms turn fluffy and white, adding beauty to the marsh landscape.
3. Reed-mace is often used in traditional crafts, particularly for weaving mats and baskets.
4. The dense growth of reed-mace along the riverbank provided excellent cover for small animals.
5. Environmentalists studied the impact of pollution on the health of reed-mace populations in the area.
