

# REFLECTOR

*Meaning: A reflector is a surface or device that redirects light or other forms of energy, often used to enhance visibility or direct beams in various applications.*

1. The car's reflector shone brightly under the streetlights, enhancing visibility at night.
2. In the science experiment, we used a reflector to redirect the laser beam onto the target.
3. During the bike ride, I made sure my helmet had a reflector to ensure I could be seen by drivers.
4. The artist incorporated a mirror-like reflector into the sculpture to create an illusion of depth.
5. As the sun set, the lake acted as a natural reflector, casting beautiful colors across the sky.
