

REFRACTIVE

Meaning: Refractive refers to the ability of a substance, such as a lens, to bend light, affecting how images are focused and perceived.

1. The refractive properties of the lens significantly enhance the clarity of the image.
2. In optometry, understanding refractive errors is essential for prescribing corrective lenses.
3. The scientist conducted experiments to measure the refractive index of various materials.
4. Refractive surgery can dramatically improve vision for those with severe myopia.
5. Light behaves differently when it passes through refractive mediums, bending at various angles.
