

RENDERER

Meaning: Renderer: a software or hardware component that converts data into visual images, particularly in graphics and gaming applications.

1. The game's graphics were significantly enhanced by the new renderer.
2. Many developers appreciate the flexibility offered by the advanced renderer in their projects.
3. The renderer struggled with complex lighting effects, resulting in a less polished final product.
4. After switching to a more efficient renderer, the animation rendered much faster.
5. The virtual reality experience was made immersive due to the capabilities of the renderer.
