

REPLICATION

Meaning: Replication refers to the process of repeating an experiment or reproducing a biological entity, such as DNA, to verify results or understand its structure and function.

1. Replication of the experiment yielded consistent results across multiple trials.
2. The scientist focused on the replication of DNA to understand genetic disorders better.
3. In art, the replication of famous paintings can sometimes blur the line between homage and forgery.
4. Successful replication of the study's findings is crucial for validating the original research.
5. The rapid replication of viruses can pose a significant challenge for the immune system.
