

# REPOPULATION

*Meaning: Repopulation refers to the process of reintroducing or increasing the numbers of a species or population in a specific area, particularly after a decline or destruction.*

1. The repopulation of the endangered species is crucial for maintaining biodiversity in the region.
2. Efforts toward the repopulation of the forest after the wildfire have begun with replanting native trees.
3. The community initiated a repopulation program to bring back the fish species that had vanished from the river.
4. Scientists are studying the effects of climate change on the repopulation of migratory bird habitats.
5. Repopulation strategies often involve the careful monitoring of genetic diversity to ensure a healthy population.
