

RETINEUM

Meaning: Retineum: a layer of tissue in the eye that contains photoreceptor cells and is essential for vision.

1. The retineum plays a crucial role in the overall function of the visual system.
2. Researchers are investigating the cellular structure of the retineum to understand its impact on vision.
3. In certain species, the retineum exhibits unique adaptations that enhance their ability to see in low light.
4. Damage to the retineum can lead to significant visual impairment or loss of sight.
5. Understanding the retineum's connections with other parts of the eye can help in developing treatments for eye diseases.
