

RETINOID

Meaning: Retinoid: a class of chemical compounds related to vitamin A, used in dermatology for treating skin conditions such as acne and wrinkles by promoting cell turnover.

1. Retinoids are commonly used in dermatology to treat acne and reduce wrinkles.
2. Many skincare products contain retinoids due to their effectiveness in promoting cell turnover.
3. The dermatologist recommended a retinoid for my stubborn dark spots.
4. Some people experience irritation when first using retinoids, so it's essential to start slowly.
5. Retinoids work by increasing collagen production and improving skin texture over time.
