

RETRACTOR

Meaning: A retractor is a surgical or mechanical instrument used to hold back or separate tissue or other materials to provide better access or visibility during procedures.

1. The surgeon carefully used the retractor to keep the incision open for better visibility.
2. In the lab, a mechanical retractor was employed to assist in the dissection of the specimen.
3. During the procedure, the nurse handed the surgeon the retractor to facilitate access to the affected area.
4. The dental retractor helped to hold the patient's cheeks away for clearer examination of the teeth.
5. Retractors are essential instruments in surgery, allowing for a clearer view of the surgical field.
