

# RETRUSION

*Meaning: Retrusion refers to the backward movement or position of the mandible (lower jaw) relative to the maxilla (upper jaw), which can impact dental alignment and health.*

1. Retrusion of the mandible can significantly affect a person's bite and overall dental health.
2. The dentist explained that retrusion in the jaw can lead to misalignment and discomfort over time.
3. After the accident, she experienced retrusion of her lower jaw, which required orthodontic intervention.
4. Understanding retrusion is essential for orthodontists when creating treatment plans for their patients.
5. The study focused on the effects of retrusion on facial aesthetics and dental function in adults.
