

RETTING

Meaning: Retting is the process of soaking harvested plant materials, such as flax, in water to decompose pectin and facilitate fiber extraction.

1. Retting is an essential step in the process of fiber extraction from flax plants.
2. The traditional method of retting involves soaking the harvested flax in water to help break down the pectin.
3. Farmers are increasingly turning to eco-friendly retting techniques to minimize environmental impact.
4. After retting, the fibers are separated from the stem, making them ready for spinning.
5. Innovative retting methods using enzymes have emerged to improve efficiency and reduce water usage.
