

RHOB

Meaning: RHOB refers to a gene that encodes a protein involved in regulating cellular functions and is associated with certain cancer mutations.

1. The RHOB protein plays a crucial role in regulating various cellular functions.
2. Researchers discovered that mutations in the RHOB gene can lead to certain types of cancer.
3. In the study, the team focused on the interaction between RHOB and other small GTPases.
4. Understanding the mechanisms of RHOB can help in developing targeted therapies.
5. Recent findings suggest that RHOB signaling pathways are involved in cell migration and adhesion.
