

RONGEUR

Meaning: Rongeur: a surgical instrument with sharp, claw-like jaws used for grasping and removing bone tissue.

1. The rongeur is an essential tool in orthopedic surgery for removing bone.
2. During the procedure, the surgeon carefully used the rongeur to shape the bone for a better fit.
3. After examining the X-rays, the doctor decided that a rongeur would be necessary to access the damaged area.
4. The rongeur's sharp edges allow for precise removal of small bone fragments without damaging surrounding tissue.
5. In veterinary medicine, a rongeur is often used to assist in orthopedic procedures on animals.
