

ROTOR

Meaning: ROTOR: A rotating part of a machine, such as a helicopter, that generates lift or thrust through its movement.

1. The helicopter's rotor spun rapidly, generating lift and allowing it to ascend gracefully.
2. Engineers analyzed the rotor's design to improve its efficiency and reduce noise during flights.
3. A malfunction in the rotor can lead to catastrophic failures, highlighting the importance of regular maintenance.
4. The drone's rotor system was remarkably efficient, enabling longer flight times and greater stability.
5. When the wind picked up, the rotor blades began to whistle, creating an eerie sound in the otherwise quiet air.
