

SAPROPHAGOUS

Meaning: Saprophagous refers to organisms that feed on decaying organic matter, such as dead plants and animals.

1. The saprophagous behavior of certain insects allows them to thrive in decaying organic matter.
2. Fungi are often classified as saprophagous because they decompose and feed on dead plant material.
3. Some species of worms are saprophagous, playing a crucial role in nutrient recycling within the soil.
4. In a healthy ecosystem, saprophagous organisms help break down dead matter, enriching the soil for new growth.
5. Researchers study saprophagous microorganisms to better understand their impact on decomposition processes.
