

SAPROPHYTIC

Meaning: Saprohytic refers to organisms, particularly fungi and bacteria, that obtain nutrients by decomposing dead organic matter.

1. Saprohytic organisms play a crucial role in nutrient cycling within ecosystems.
2. The saprophytic fungi broke down the organic matter, enriching the soil in the process.
3. Many plants depend on saprophytic bacteria for the decomposition of dead materials.
4. In nature, saprophytic species are essential for recycling nutrients back into the environment.
5. The study of saprophytic relationships can provide insights into soil health and biodiversity.
