

SCORIFIER

Meaning: A scorifier is a laboratory apparatus used to fuse metal samples for analysis by facilitating the separation of impurities.

1. A scorifier is often used in laboratories to help in the analysis of metal samples.
2. To achieve accurate results, it's essential to properly clean the scorifier before use.
3. The scorifier melted the sample efficiently, allowing for a clear separation of impurities.
4. Researchers noted that the choice of scorifier can significantly impact the quality of the results.
5. After the experiment, the scorifier needed to be carefully cooled before being handled.
