

SEDGE

Meaning: Sedge is a type of grass-like plant that typically grows in wetlands, characterized by triangular stems and often found in marshy areas.

1. The marsh was filled with tall sedge, swaying gently in the breeze.
2. Birdwatchers often find a variety of species nesting among the sedge along the riverbank.
3. The sedge was an important part of the ecosystem, providing shelter for many small animals.
4. During our hike, we noticed that the sedge thrived in the wetland areas, creating a lush green carpet.
5. Many traditional crafts use sedge for weaving mats and baskets due to its durability.
