

SEDIMENTAL

Meaning: Sedimental refers to materials, such as soil or rock particles, that have been deposited by natural processes, often forming layers that provide insight into historical geological and environmental conditions.

1. The sedimental layers in the valley tell a story of ancient river flows.
2. Geologists often study sedimental deposits to understand past environmental conditions.
3. The sedimental composition of the soil affects the types of vegetation that can thrive in an area.
4. Fossils found in sedimental rock provide valuable insights into prehistoric life.
5. Scientists are investigating how sedimental processes influence coastal erosion and habitat formation.
