

SEISMOGRAM

Meaning: A seismogram is a visual record produced by a seismograph that shows the intensity and duration of seismic waves during an earthquake.

1. The seismogram revealed the intensity and duration of the earthquake's tremors.
2. Researchers analyzed the seismogram to determine the earthquake's epicenter and magnitude.
3. By comparing multiple seismograms, scientists can better understand the seismic activity of a region.
4. The seismogram displayed a series of waves, indicating the arrival of seismic energy from deep within the Earth.
5. Advanced technology has improved the clarity and accuracy of seismograms in recent years.
