

SEMIDIURNAL

Meaning: Semidiurnal refers to a tidal pattern characterized by two high tides and two low tides occurring each lunar day.

1. The semidiurnal tide pattern in the bay creates regular cycles of flooding and ebbing.
2. Researchers noted that the semidiurnal nature of the tidal waves influences coastal erosion rates.
3. In many coastal regions, semidiurnal tides can be observed twice a day, alternating between high and low water levels.
4. Understanding semidiurnal rhythms is crucial for predicting marine life behaviors and migrations.
5. The semidiurnal fluctuations in water levels significantly affect local fishing practices and boat navigation.
