

SEMINATION

Meaning: Semination refers to the process of fertilization or the act of sowing seeds, particularly in the context of plant reproduction and animal breeding.

1. The seminational process in plants is crucial for the continuation of their species.
2. In animal breeding, understanding the timing of seminational events can improve reproductive success.
3. Research on seminational techniques has advanced significantly over the past few decades.
4. The seminational phase is often overlooked in discussions about agricultural productivity.
5. Proper care during seminational periods can dramatically impact offspring viability.
