

SENSITIZER

Meaning: A sensitizer is a substance that increases the reactivity of a chemical process or enhances the sensitivity of a material, such as photographic film, to light.

1. The chemist explained how the sensitizer enhances the reaction rate in the experiment.
2. In the context of photography, a sensitizer is crucial for making the film more responsive to light.
3. Certain allergens can act as sensitizers, triggering immune responses in sensitive individuals.
4. The new sunscreen formulation includes a natural sensitizer to improve its effectiveness against UV rays.
5. Researchers are studying how various sensitizers can influence the efficacy of vaccines.
