

SEPSIS

Meaning: Sepsis is a severe medical condition resulting from the body's extreme response to infection, leading to tissue damage and potential organ failure.

1. Sepsis is a life-threatening condition that arises when the body's response to infection causes injury to its own tissues.
2. Early recognition and treatment of sepsis can significantly improve patient outcomes and survival rates.
3. Patients with sepsis often present with symptoms such as fever, increased heart rate, and confusion.
4. Healthcare providers must remain vigilant for signs of sepsis in individuals with compromised immune systems.
5. The sepsis protocol in our hospital includes rapid administration of antibiotics and intravenous fluids to stabilize patients.
