

SEPTUM

Meaning: Septum: a dividing wall or membrane, particularly in anatomy, that separates two cavities or chambers, such as in the heart or nasal passages.

1. The septum plays a crucial role in separating the left and right chambers of the heart.
2. In anatomy class, we learned that the nasal septum can affect breathing if it is deviated.
3. The surgeon carefully examined the patient's septum before proceeding with the operation.
4. Some species of fish have a unique septum that aids in their buoyancy.
5. In certain types of plants, the septum can help in the formation of seeds within the fruit.
