

SILAGE

Meaning: Silage is fermented, high-moisture fodder made from green foliage crops, used as feed for livestock.

1. Silage is often used as a nutritious feed for livestock during the winter months.
2. Farmers carefully monitor the fermentation process to ensure the silage maintains its quality.
3. The smell of freshly cut grass filled the air as the team prepared to make silage for the cows.
4. Proper storage of silage is crucial to prevent spoilage and preserve its nutritional value.
5. Innovative techniques in silage production can significantly enhance the sustainability of dairy farming.
