

SILICA

Meaning: Silica is a hard, unreactive compound composed of silicon and oxygen, commonly found in sand and used as a key ingredient in glass, ceramics, and concrete.

1. Silica is a common component of many types of glass and ceramics.
2. The presence of silica in the sand makes it ideal for creating strong concrete.
3. Workers in industries dealing with silica dust must take precautions to protect their lungs.
4. Silica gel packets are often included in packaging to keep moisture at bay.
5. Research is ongoing to explore the potential health effects of long-term silica exposure.
