

SOLARIZATION

Meaning: Solarization is a method of controlling soil-borne pathogens by covering moist soil with clear plastic to trap solar heat, promoting high temperatures that eliminate harmful organisms.

1. Solarization is an effective method for controlling soil-borne pathogens in organic farming.
2. The process of solarization involves covering moist soil with clear plastic to trap heat from the sun.
3. Researchers found that solarization can significantly enhance plant growth by improving soil health.
4. Farmers in arid regions have adopted solarization as a sustainable technique for weed management.
5. By applying solarization, we can reduce the need for chemical pesticides and fertilizers in agriculture.
