

# SONOMETER

*Meaning: A sonometer is an instrument used to study sound waves and demonstrate the relationship between string tension and pitch.*

1. A sonometer is an essential instrument in studying the properties of sound waves.
2. In physics experiments, a sonometer can demonstrate how string tension affects pitch.
3. The sonometer's ability to visually represent frequency makes it a valuable teaching tool.
4. By adjusting the length of the string on a sonometer, students can explore different harmonic frequencies.
5. The sonometer allows musicians to understand the relationship between string length and musical notes.
