

SPANWORM

Meaning: A spanworm is the larval stage of certain moths, characterized by its elongated body and ability to camouflage, often causing damage to plants.

1. The spanworm slowly crawled along the leaf, blending in with its surroundings.
2. Gardeners often struggle to keep spanworms from damaging their precious plants.
3. During the spring, the spanworm emerges from its cocoon, ready to continue its life cycle.
4. Teachers used a spanworm to demonstrate metamorphosis during the biology class.
5. Observing the spanworm's unique movements can be both fascinating and educational.
