SPHERULITIC

Meaning: Spherulitic refers to a mineralogical texture characterized by the presence of spherical or radiating crystal aggregates, often found in volcanic or sedimentary rocks.

1. The geologist noted the presence of spherulitic structures within the volcanic rock sample.
2. Her research focused on the spherulitic formations found in certain types of sedimentary deposits.
3. The spherulitic texture of the material gave it unique optical properties that fascinated the scientists.
4. In the laboratory, they created a synthetic substance that mimicked the spherulitic patterns observed in nature.
5. Spherulitic crystals often form under specific conditions, leading to diverse geological formations.
