

SPOOLER

Meaning: A spooler is a software program that manages print jobs by temporarily storing them in a queue before sending them to a printer for processing.

1. The spooler efficiently managed multiple print jobs, ensuring each one was processed in order.
2. After troubleshooting the printer, I discovered that the spooler service had crashed and needed to be restarted.
3. In a networked environment, the spooler allows several users to send documents to the printer simultaneously.
4. He watched as the spooler filled up with requests, each one waiting its turn to be printed.
5. To optimize performance, the IT department decided to upgrade the spooler software on all workstations.
