

SPOONWORM

Meaning: Spoonworm is a marine annelid worm that burrows into the ocean floor, often creating a habitat and playing a role in the ecosystem.

1. The spoonworm burrows into the ocean floor, creating a unique habitat for itself.
2. Many marine biologists study spoonworms to understand their role in the ecosystem.
3. Despite their name, spoonworms are not actually worms but rather a type of marine polychaete.
4. The vibrant colors of the spoonworm can often be seen as it emerges from its burrow.
5. Spoonworms have specialized feeding structures that help them capture food from the water.
