

SPUTUM

Meaning: Sputum is a mucous substance that is expelled from the respiratory tract, often containing phlegm and other substances, used for medical analysis.

1. The doctor requested a sample of sputum to test for any bacterial infections.
2. Patients with chronic bronchitis often produce a significant amount of sputum daily.
3. The lab technician analyzed the sputum under a microscope to identify any abnormalities.
4. Coughing up green or yellow sputum may indicate a respiratory infection that requires treatment.
5. In some cases, a cough that produces sputum can be a sign of a more serious lung condition.
