

STAMEN

Meaning: Stamen: the male reproductive organ of a flower, consisting of an anther and a filament, responsible for producing pollen.

1. The stamen is the male reproductive part of a flower, responsible for producing pollen.
2. During a botany class, we learned how to identify the stamen among other flower structures.
3. The vibrant colors of the petals often attract pollinators to the stamen hidden within.
4. In some plants, the stamen can be quite long, extending well beyond the petals.
5. Understanding the role of the stamen is crucial for anyone studying plant reproduction.
