

STEGOSAURUS

Meaning: Stegosaurus is a genus of large, herbivorous dinosaurs characterized by their distinctive double row of bony plates along the back and spiked tails, known to have lived during the Late Jurassic period.

1. The stegosaurus is known for its distinctive double row of kite-shaped plates along its back.
2. Paleontologists believe the stegosaurus used its spiked tail for defense against predators.
3. In popular culture, the stegosaurus often appears as a gentle giant in children's books and movies.
4. The fossilized remains of a stegosaurus were discovered in North America, providing insights into its habitat.
5. Despite its size, the stegosaurus primarily fed on low-lying plants and ferns.
