

STETHOSCOPY

Meaning: Stethoscopy is the clinical practice of using a stethoscope to listen to internal sounds of the body, particularly those of the heart and lungs.

1. Stethoscopy is a vital skill that allows doctors to assess heart and lung sounds effectively.
2. During the patient's examination, the physician used stethoscopy to detect any irregularities.
3. Advancements in stethoscopy technology have improved the accuracy of diagnoses in clinical settings.
4. Learning stethoscopy techniques is essential for medical students during their training.
5. The sound amplification in modern stethoscopes enhances the effectiveness of stethoscopy in noisy environments.
