

# STRABISMOMETER

*Meaning: A strabismometer is a medical instrument used to measure the degree of misalignment of the eyes, aiding in the diagnosis of strabismus.*

1. The optometrist used a strabismometer to accurately measure the degree of misalignment in the patient's eyes.
2. During the eye examination, the strabismometer provided critical data for diagnosing the child's vision condition.
3. With the strabismometer, the technician was able to determine the effectiveness of the recent eye muscle surgery.
4. Understanding the readings from the strabismometer allowed the ophthalmologist to tailor a treatment plan for the patient.
5. Strabismometers are essential tools in pediatric ophthalmology for assessing and managing ocular alignment disorders.
