

STROBILATION

Meaning: Strobilation is a reproductive process in which certain marine organisms, such as jellyfish, produce multiple offspring through the sequential budding of larvae from a parent.

1. Strobilation is a fascinating reproductive process observed in certain marine organisms.
2. The jellyfish's method of strobilation allows it to produce multiple offspring simultaneously.
3. Researchers are studying strobilation to better understand the life cycles of various invertebrates.
4. In strobilation, the organism divides its body into segments, which later develop into new individuals.
5. Observing strobilation in action can provide insights into the evolutionary adaptations of these species.
