

SUBCORACOID

Meaning: Subcoracoid refers to the anatomical area located beneath the coracoid process of the scapula, often associated with structures like the bursa and lesions in the shoulder region.

1. The subcoracoid bursa can become inflamed due to repetitive shoulder movements.
2. Radiologists often look for subcoracoid lesions during imaging studies of the shoulder.
3. Injuries to the subcoracoid area may lead to significant pain and limitation of motion.
4. The anatomical relationship of the subcoracoid process is crucial for shoulder surgeries.
5. Physical therapy exercises can help alleviate discomfort associated with subcoracoid impingement.
