

SUBFAMILY

Meaning: Subfamily: a taxonomic category that ranks below a family and above a genus, used to group organisms that share common traits and evolutionary relationships.

1. The subfamily of the plant exhibits unique characteristics that differentiate it from others in the same family.
2. In zoology, the subfamily classification helps to clarify evolutionary relationships between species.
3. Researchers discovered a new subfamily of insects that thrives in extreme environments.
4. The subfamily of mammals includes both carnivorous and herbivorous species, showcasing a wide range of adaptations.
5. Taxonomists often revise the criteria for defining a subfamily as new genetic data becomes available.
