

SUBFIBROUS

Meaning: Subfibrous refers to a layer or texture that is somewhat fibrous in nature, typically indicating a composition that is not fully fibrous but has a fibrous quality, often used in geological or artistic contexts.

1. The geological survey revealed that the subfibrous layer beneath the surface was rich in minerals.
2. The artist chose a subfibrous texture for the sculpture, giving it a unique depth and character.
3. In the context of soil science, subfibrous materials play a crucial role in nutrient retention.
4. The researchers noted the subfibrous nature of the sample, indicating a significant amount of organic matter.
5. During the excavation, they encountered a subfibrous stratum that suggested past ecological conditions.
