

SUBSCRIPT

Meaning: Subscript: a character or symbol written or printed below the line of text, often used to denote specific quantities or terms in scientific and mathematical notation.

1. The chemical formula showed the number of atoms in each molecule using subscript notation.
2. In mathematics, a subscript can indicate a specific term in a sequence or series.
3. When typing in a word processor, you can easily format text to appear in subscript for scientific documents.
4. The author's name was written in small subscript at the bottom of the page to credit the original source.
5. Subscripts are essential in defining variables in equations and separating different components of a formula.
6. The formula includes a subscript that indicates the number of atoms in the molecule.
7. In mathematical notation, a subscript can help clarify which variable is being referenced.
8. When writing chemical equations, subscripts are essential for showing the composition of compounds.
9. In programming, subscripts are often used to access specific elements in an array.
10. The teacher explained how to interpret subscripts in the context of chemical formulas.
