

# SUBSPECIES

*Meaning: Subspecies: a taxonomic category that ranks below species, used to classify a distinct population of organisms that is genetically different and adapted to specific environmental conditions.*

1. The biologist identified a new subspecies of the rare butterfly found only in this isolated region.
2. Conservation efforts are crucial to protect the subspecies that is threatened by habitat loss.
3. Each subspecies of this plant exhibits unique adaptations to its specific environment.
4. The researchers were excited to discover that the subspecies differed significantly in coloration from its relatives.
5. Understanding the genetic differences between subspecies can help in conservation planning and biodiversity management.
