SUBSULPHIDE

Meaning: Subsulphide is a chemical compound containing a lower proportion of sulfur than a corresponding sulfide, often acting as an intermediate in chemical reactions.

1. The researchers discovered that the subsulphide formed a critical intermediate in the oxidation process.

2. In the laboratory, the chemist carefully measured the subsulphide to ensure accurate results in the experiment.

3. Certain minerals contain subsulphides, which can influence their chemical properties and industrial applications.

4. The unique properties of the subsulphide make it a subject of interest in materials science research.

5. He explained how the reaction of sulfides with metal ions can lead to the formation of subsulphides in various conditions.
