

SUBSULTUS

Meaning: Subsultus refers to involuntary, rapid, and jerky movements or twitching of the limbs, often indicative of neurological issues.

1. The patient's subsultus indicated a severe neurological disturbance that required immediate attention.
2. During the examination, the doctor noted the subsultus of the limbs, which suggested underlying spasticity.
3. In rare cases, subsultus can be mistaken for tremors, leading to potential misdiagnosis.
4. The research team studied subsultus patterns to better understand their implications in motor disorders.
5. Observing subsultus in a patient can provide critical insights into the progression of certain diseases.
